12	Mother tongue of the foreign-born white population, for cities of 25,000 or more 1930	388

CHAPTER 7.—MOTHER TONGUE OF THE FOREIGN-BORN WHITE POPULATION

INTRODUCTION

The inquiry as to the mother tongue of the foreign-born white population was first made at the census of 1910. At that census, and also at the census of 1920, the inquiry covered all of the foreign white stock, including native white persons of foreign or mixed parentage. At the census of 1930, the inquiry was restricted to the foreign-born population. Geographically, the statistics here presented relate to the population of continental United States, the divisions and States, and cities having 25,000 inhabitants or more. No tabulation of mother tongue was made for cities of less than 25,000 nor for counties. Data for Hawaii, Puerto Rico, the Virgin Islands, and the Panama Canal Zone are shown in the report entitled "Outlying Territories and Possessions."

Although information as to "mother tongue"—that is, the language of customary speech in the home prior to immigration—was secured for all persons of foreign birth, it has been tabulated only for white persons, since most persons of each of the other races speak one characteristic language—Spanish for the Mexicans, Chinese for the Chinese, Japanese for the Japanese, etc.

While the statistics of mother tongue and of country of birth of the foreign-born white relate to the same aggregate population, they deal with essentially different characteristics. The classification by country of birth is made with reference to geographic origin, while the classification by mother tongue indicates in general the racial origin. The two classifications, while closely related in most cases, are entirely distinct, since the mother tongue of an immigrant is not necessarily the language most commonly used in the country from which he came.

The total number of foreign-born white persons reported in the census of 1930 was 13,366,407. For 1920, the adjusted figure corresponding with the total foreign-born white as reported in 1930, is 13,255,394. This figure is the total number of foreign-born white persons enumerated in 1920, minus 457,360 persons (estimated) who would have been counted as Mexican under the 1930 rules for classification. Since these persons were, with very few exceptions, of Spanish mother tongue, the whole number was subtracted from the 1920 group reporting that language. Thus the change in classification does not seriously affect the comparability of the statistics of mother tongue as between 1920 and 1930.

Classification of mother tongues.—The mother tongues for which statistics are presented in this report are classified according to linguistic groups as follows:

- English and Celtic (includes Irish, Scotch, and Welsh).
- Germanic—
  - German.
  - Dutch (includes Frisian).
  - Flemish.
- Scandinavian—
  - Swedish.
  - Norwegian.
  - Danish.
  - Icelandic.
- Latin and Greek—
  - Italian (includes Romansh and Friulian).
  - French (includes Breton).
  - Spanish (includes Basque).
  - Portuguese.
  - Rumanian.
  - Greek.
- Slavic and Lettic—
  - Polish.
  - Czech.
  - Slovak.
  - Russian.
  - Ruthenian (Russniak).
  - Ukrainian.
  - Slovenian.
  - Croatian (includes Dalmatian).
  - Serbian (includes Montenegrin)
  - Bulgarian.
  - Wendish.
  - Lithuanian.
  - Lettish.
- Unclassified—
  - Yiddish.
  - Magyar.
  - Finnish (includes Lappish).
  - Estonian.
  - Armenian.
  - Arabic.
  - Turkish.
  - Albanian.
  - All other (includes Persian, Gypsy, Georgian, Kurdish, and Egyptian).
- Unknown.

In the main, this classification is the same as that used in 1920 and 1910. There have, however, been a few changes in designation, and a few combinations and separations. Dutch, in 1920, was designated as "Dutch and Frisian," Yiddish as "Yiddish and Hebrew" and Arabic as "Syrian and Arabic." The term "Frisian" was dropped because in the census returns the number so reported was insignificant. Hebrew and Syrian were dropped in the interest of accuracy, as these terms properly apply to languages no longer used in common speech. In 1920, Croatian and Dalmatian, and Serbian and Montenegrin, were each

shown separately. These languages were very generally confused and they are so similar that the distinction was not considered of sufficient importance for retention. In fact, all of the Serbo-Croatian tongues are practically dialects of the same language, and the Serbo-Croatian total is perhaps more significant than the figures for Serbian and Croatian separately.

On the other hand, Icelandic, although similar to Danish, is shown separate from its parent language in 1930. Similarly, Ukrainian has been differentiated from Ruthenian, Lettish from Lithuanian, and Estonian from Finnish. It is believed that these separations have been made with a reasonable degree of accuracy, although in the case of Ruthenian and Ukrainian the distinction is more a matter of country of birth than of language.

The 12 leading mother tongues, as returned in the census of 1930, are shown in order of numerical importance in Table 1, with comparative figures for 1920 and 1910.

TABLE 1.—PRINCIPAL MOTHER TONGUES OF THE FOREIGN-BORN WHITE POPULATION OF THE UNITED STATES: 1930, 1920, AND 1910

[1] Adjusted figures; see headnote to Table 4. [2] Corrected figures.

Mother tongue in relation to ethnic stock.—In general, the returns for mother tongue may be taken as indicative of ethnic stock, although there are many exceptions to this rule. For example, persons reported under the linguistic group "English and Celtic" belong to several distinct ethnic stocks, of which the most important are the Anglo-Saxons of England, the Kymric Celts of Wales and Cornwall, and the Gaelic Celts of Ireland and the highlands of Scotland. English is now the mother tongue of practically all of these peoples, although Welsh is still spoken by an appreciable number of persons in Wales, and Gaelic by a small number in Ireland. In many cases the mother tongue was returned as Irish, Scotch, or Welsh, but these returns were not separately tabulated, as it was evident that the two former, in particular, often represented persons speaking English with an Irish or Scotch accent or "brogue," rather than persons speaking the distinctive Irish or Scotch (Gaelic) languages. Other ethnic distinctions not indicated by the statistics of mother tongue are those between French and Breton stocks, Spanish and Basque, Northern and Southern Italian, and North German as distinguished from South German and Austrian.

Conversely, other ethnic groups comprise more people than those who speak the mother tongue most characteristic of the group. Yiddish as a mother tongue is spoken by only a part of the immigrants of Jewish stock. Many Jews of foreign birth report German, Russian, or other languages as their mother tongue. The returns of the census of 1920, in particular, probably exaggerate the number of Russian mother tongue at the expense of Yiddish. There is no important ethnic distinction between Norwegians, Danes, and Icelanders, yet their mother tongues are separately reported. The Welsh and the Bretons are ethnically similar, yet the first are shown with English and Celtic as their mother tongue and the second with French.

Mother tongue in relation to country of birth.—Statistics as to mother tongue are of greatest significance with reference to persons born in Austria, Belgium, Canada, Czechoslovakia, Hungary, Lithuania, Poland, Rumania, Russia, Switzerland, and Yugoslavia. Immigrants from each of these countries include persons of different ethnic groups, which may to some extent be distinguished by their mother tongue. The leading mother tongues spoken by persons in the United States who were born in these countries are shown in Table 2.

In Table 6, persons of each mother tongue are classified by country of birth, and in Table 7, persons born in each specified country are classified by mother tongue. The country of birth in both tables refers to the present or postwar area.

Since, however, a great majority of the foreign born came to the United States before the War, it is often difficult to determine the country of birth on a postwar basis. Many of the changes in country of birth shown in Tables 6 and 7 between 1920 and 1930, especially those for central and eastern Europe, are due to more specific returns or to different methods of classification, rather than to actual changes in the composition of the foreign-born population. Effort was made at both censuses to ascertain the actual birthplaces of persons born in the sections of Europe whose boundaries were changed as a result of the World War, but in 1920 these boundary changes were still too recent to be fully reflected in the returns made to the census enumerators. By 1930, the revised boundaries had become more familiar, and the returns were more in accordance with postwar areas. An illustration of the improved returns is shown in Table 6 for Slovak mother tongue. In 1920 the percentage reported as born in Austria was 32.9, which was reduced to 2.4 in 1930, with a corresponding increase in the percentage born in Czechoslovakia from 48.4 to 91.3.

Urban and rural population.—Since there are marked differences in the racial distribution of the foreign-born white population of urban and rural areas, statistics of mother tongue are presented for these areas in Tables 3, 5, and 10.

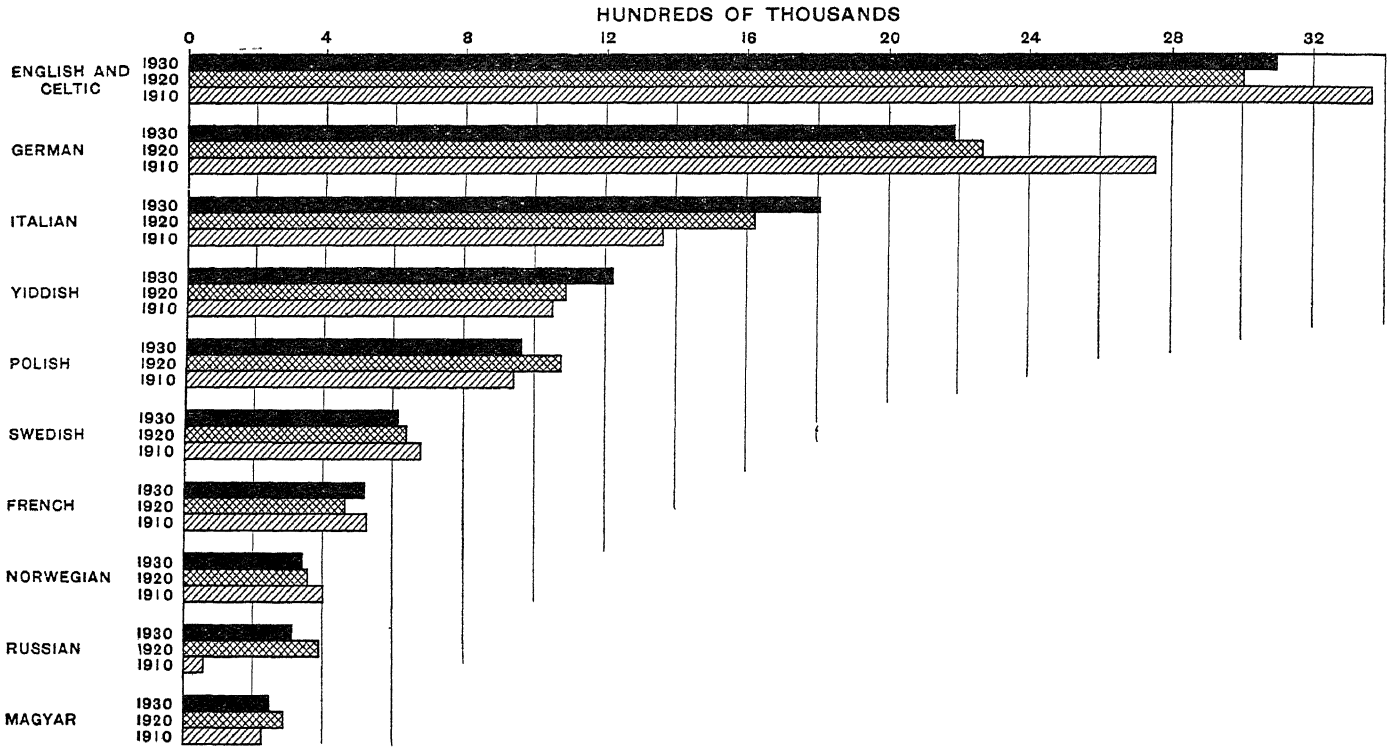
Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States—New Hampshire, Massachusetts, and Rhode Island—conditions are exceptional in that the compactly built portions of towns (townships) are not separately incorporated or politically distinct in any way from the rural territory within the same town; nor is it the usual practice to incorporate even the larger places as cities until they attain a population in excess of 10,000. Consequently, if only cities were counted as urban the classification would be quite inadequate. In these States the urban classification has been made to include, in addition to the regularly incorporated cities, those towns in which there is a village or thickly settled area having more than 2,500 inhabitants and comprising, either by itself or when combined with other villages in the same town, more than 50 per cent of the total population of the town.

One other modification has been made in the definition of urban population for use in connection with the 1930 census. This extends the definition so as to include townships and other political subdivisions (not incorporated as municipalities, nor containing any area so incorporated) which had a total population of 10,000 or more, and a population density of 1,000 or more per square mile.

More than four-fifths of the total foreign-born white population of the United States is found in urban territory. There are wide differences, however, among the various racial groups, as indicated by mother tongue, in this respect; 98.4 per cent of the foreign-born white persons reporting Yiddish as mother tongue were in urban territory, as compared with 54.1 per cent of those reporting Finnish as mother tongue, and 55.8 per cent of those reporting Norwegian.

Rural-farm and rural-nonfarm population.—In addition to the classification of the population as urban and rural, which is based on the size (number of inhabitants) and the political status (municipal incorporation) of the geographic unit in which the persons live, the population, both urban and rural, is further classified as farm and nonfarm, on the basis of a question reading "Does this family live on a farm?"

For the farm population living in urban territory, which forms less than 1 per cent of the total farm population, no detailed tabulations were made; hence the presentation of classified data for the farm population is limited to that part living in rural territory and designated as rural-farm population. This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, rural-farm, and rural-nonfarm) and partly because it is felt that in general the farm families living within the corporate limits of cities or other incorporated places are living under conditions at least somewhat urban, rather than under typical farm conditions.



The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

There are few characteristics in which the foreign-born of the different racial groups differ more widely than in their tendency to settle on farms. In Table 3 are presented the United States totals for the principal mother tongues, arranged in order of the percentage found in the rural-farm population.

[1] Icelandic (2,369) included with Danish in 1920; can not be separated by country of birth.
[2] Adjusted figures. The foreign-born white population as classified in 1920 included 457,360 persons who would have been counted as Mexican in 1930. These have been subtracted from the white persons born in Mexico of Spanish mother tongue.
[3] Latvia included with Russia in 1920.

TABLE 9.—MOTHER TONGUE OF THE FOREIGN-BORN WHITE POPULATION, BY SEX, BY DIVISIONS AND STATES: 1930, 1920, AND 1910

[Figures for 1920 and 1910 have been adjusted by deducting from the total, and from Spanish mother tongue, the estimated number of persons who would have been classified as Mexicans in 1930. Per cent not shown where less than 0.1]

TABLE 11.—MOTHER TONGUE OF THE FOREIGN-BORN WHITE POPULATION IN CITIES OF 100,000 OR MORE HAVING AT LEAST 8,000 FOREIGN-BORN WHITE: 1930 AND 1920

[Figures for 1920 have been adjusted for those cities having 100 or more Mexicans in their population in 1930 by deducting from the total number, and from Spanish mother tongue, the estimated number of persons who would have been classified as Mexican in 1930. Per cent not shown where less than 0.1]

TABLES

United States

1. Foreign-born population of the United States by citizenship and sex: 1930 and 1920 402
2. Foreign-born white population of the United States by citizenship and country of birth: 1930 403
3. Citizenship of the foreign-born white population in the urban, rural-farm, and rural-nonfarm areas of the United States: 1930 403
4. Citizenship of the population, by color, nativity, sex, and age, for the United States: 1890 to 1930 405
5. Citizenship of the foreign-born white population, by sex and country of birth, for the United States: 1930 and 1920 406
6. Citizenship of the foreign-born white population 21 years old and over, by sex and country of birth, for the United States: 1930 and 1920 408
7. Citizenship of the population, by color, nativity, sex, and age, in urban, rural-farm, and rural-nonfarm areas, for the United States: 1930 410
8. Citizenship of the foreign-born white population, by country of birth, in urban, rural-farm, and rural-nonfarm areas, for the United States: 1930 411
9. Citizenship of the foreign-born white population 21 years old and over, by country of birth and sex, in urban, rural-farm, and rural-nonfarm areas, for the United States: 1930 412

Divisions and States

Page

10. Citizenship of the foreign-born and the foreign-born white population, by divisions and States: 1930 414
11. Citizenship of the foreign-born white population, by sex, by divisions and States: 1930 415
12. Citizenship of the foreign-born white population 21 years old and over, by sex, by divisions and States: 1900 to 1930 416
13. Per cent distribution by citizenship of the foreign-born white population 21 years old and over, by sex, by divisions and States: 1900 to 1930 418
14. Native and naturalized population 21 years old and over (potential voting population), by color or race, by divisions and States: 1930 419
15. Native and naturalized population 21 years old and over (potential voting population), by sex, by divisions and States: 1930 420
16. Citizenship of the foreign-born white population by country of birth, by divisions and States: 1930 and 1920 421
17. Citizenship of the foreign-born white population 21 years old and over, by sex and country of birth, by States: 1930 and 1920 430
18. Citizenship of the foreign-born Negro population, by States: 1930 446
19. Citizenship of the foreign-born Mexican population, by States: 1930 446
20. Citizenship of the foreign-born white population 21 years old and over, by country of birth and sex, for urban, rural-farm, and rural-nonfarm areas, by States: 1930 447

Principal Cities

21. Citizenship of the foreign-born and the foreign-born white population, for cities of 100,000 or more: 1930 463
22. Citizenship of the foreign-born white population, by sex, for cities of 100,000 or more: 1930 464
23. Citizenship of the foreign-born white population by country of birth, for cities of 500,000 or more: 1930 and 1920 465
24. Citizenship of the foreign-born white population 21 years old and over, by sex and country of birth, for cities of 500,000 or more: 1930 and 1920 469
25. Citizenship of the foreign-born white population 21 years old and over, by sex and country of birth, for cities of 25,000 to 500,000: 1930 477

CHAPTER 8.—CITIZENSHIP OF THE FOREIGN BORN

INTRODUCTION

The inquiry as to the citizenship of the foreign born has been made at each census beginning with 1890. In that year, however, no tabulation was made by color or race; and in 1890, 1900, and 1910 the returns related only to foreign-born males 21 years of age and over. At the census of 1920, which was the first census subsequent to the adoption of the 19th amendment to the Constitution of the United States, complete data as to citizenship were presented for foreign-born persons of both sexes; and the tabulations were extended to cover persons of all ages rather than being limited to those of voting age only.

The statistics here presented relate to the population of continental United States, the States, and those cities having 25,000 inhabitants or more. Citizenship data for the foreign-born white population 21 years old and over, by sex, are presented by counties and for cities and other urban places of 2,500 or more inhabitants in Volume III of the Reports on Population and in the Second Series State bulletins of which that volume is made up. Statistics for Alaska, Hawaii, Puerto Rico, Virgin Islands, and the Panama Canal Zone are given in the Fifteenth Census Report on Outlying Territories and Possessions.

The citizenship classification.—The classification in regard to citizenship embraces three specific groups, namely, naturalized, having first papers, and alien, the last comprising those persons who have taken no steps toward becoming naturalized. In addition, there is a fourth group, designated "Unknown," and made up of persons for whom the enumerator secured no report as to citizenship.

The "first papers" constitute the declaration of intention to become a citizen of the United States, which declaration may be made by any eligible alien 18 years of age or more at any time after arrival in the United States. The process of naturalization can not ordinarily be completed, however, until at least two years (but not more than seven years) have elapsed after the declaration of intention; nor until the applicant has resided at least five years continuously in the United States and at least six months continuously in the county in which his petition is filed. Following the World War the requirement of five years of residence was in some cases waived on account of military or naval service. Under the present naturalization law, an exception to the requirement of five years' residence is made in the case of an alien woman who married a citizen after September 22, 1922, or whose husband was naturalized after that date. Under these conditions, a woman may be naturalized without making a declaration of intention and after but one year's residence in the United States.

Under the provisions of the naturalization laws in force at the time the Fourteenth Census was taken in 1920, the citizenship status of a married woman was the same as that of her husband (but if the husband had taken out his first naturalization papers only, his wife was classified in the census returns as an alien); for an unmarried woman the process of naturalization was the same as for a man; a foreign-born widow or foreign-born divorced wife of a citizen of the United States retained the citizenship status of her former husband so long as she continued to reside in this country; a foreign-born widow or foreign-born divorced wife of an alien might become naturalized in the same manner as a man; and, in general, foreign-born minors had the same citizenship status as their parents.

By an act of Congress approved September 22, 1922, and effective from that date, it is provided that the citizenship status of a married woman shall no longer follow that of her husband, and that a married woman shall have the privilege of becoming naturalized on her own account. The status of single alien women is not changed by this law. The act referred to further provides that any woman citizen who marries an alien shall not cease to be a citizen unless she makes a formal renunciation of her citizenship, or unless she marries an alien ineligible to citizenship, in which case she shall cease to be a citizen; and that no married woman whose husband is not eligible to citizenship shall be naturalized during the continuance of the marital status. Under the present law the citizenship of legitimate minor children in general follows that of the father.

TABLE 2.—FOREIGN-BORN WHITE POPULATION OF THE UNITED STATES BY CITIZENSHIP AND COUNTRY OF BIRTH: 1930

COUNTRY OF BIRTH	Total foreign-born white	Naturalized	Having first papers	Alien	Unknown	Per cent naturalized

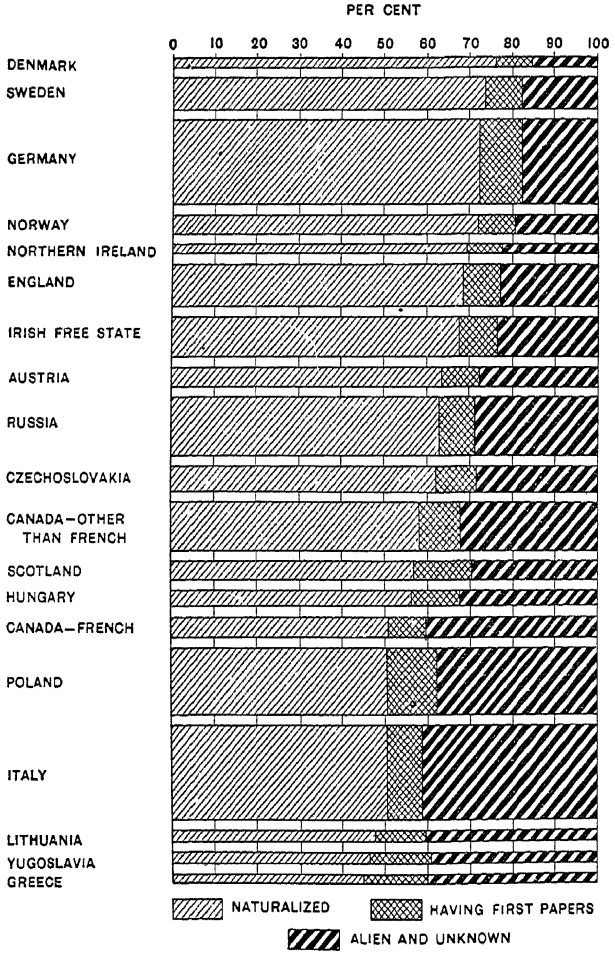
All other	360,630	148,562	37,658	155,339	19,071	41.2

Urban, rural-farm, and rural-nonfarm population.—Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, towns (townships) are classified as urban if they have a population of 2,500 or more and certain urban characteristics; and a few large and densely populated townships in other States are likewise classified, even though not formally incorporated as municipalities.



In addition to the classification of the population as urban and rural, the rural population is subdivided into rural-farm and rural-nonfarm on the basis of the replies to a question reading "Does this family live on a farm?" The rural-farm population includes all persons living on farms in the rural areas. The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated or unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

The citizenship data for the foreign-born white population in urban, rural-farm, and rural-nonfarm areas is summarized in Table 3.

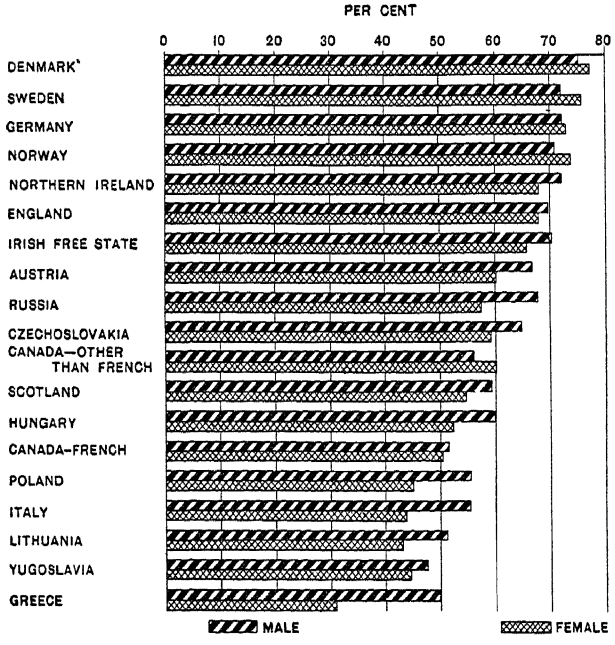


TABLE 3.—CITIZENSHIP OF THE FOREIGN-BORN WHITE POPULATION IN THE URBAN, RURAL-FARM, AND RURAL-NONFARM AREAS OF THE UNITED STATES: 1930

CITIZENSHIP	URBAN		RURAL-FARM		RURAL-NONFARM	
	Number	Per cent	Number	Per cent	Number	Per cent
Foreign-born white	**10,728,859**	**100.0**	**1,084,087**	**100.0**	**1,555,461**	**100.0**
Naturalized	6,188,152	57.7	746,039	68.8	925,002	59.5

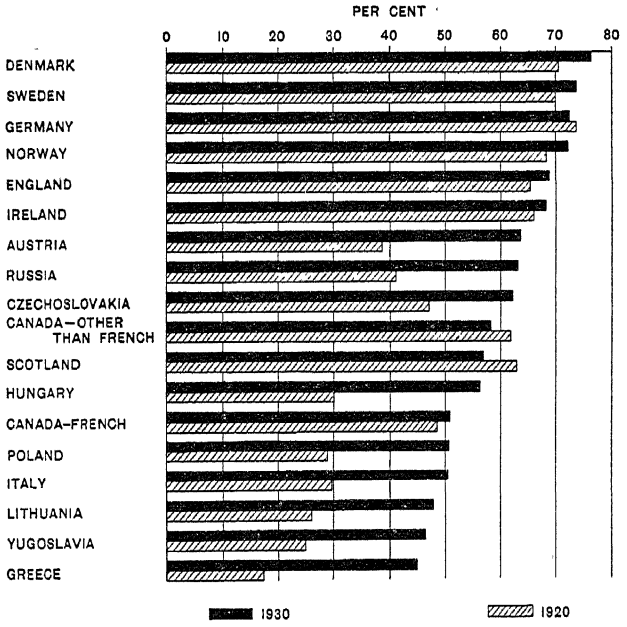
Alien	3,133,153	29.2	222,466	20.5	431,467	27.7
Unknown	351,490	3.3	42,705	3.9	79,412	5.1



Citizenship of Foreign-born White Persons 21 Years Old and Over, by Country of Birth: 1930

Percentage Naturalized in the Foreign-born White Population 21 Years Old and Over, by Country of Birth and Sex: 1930

Percentage Naturalized in the Foreign-born White Population 21 Years Old and Over, by Country of Birth: 1930 and 1920

Percentage Naturalized in the Foreign-born White Population 21 Years Old and Over, by States: 1930

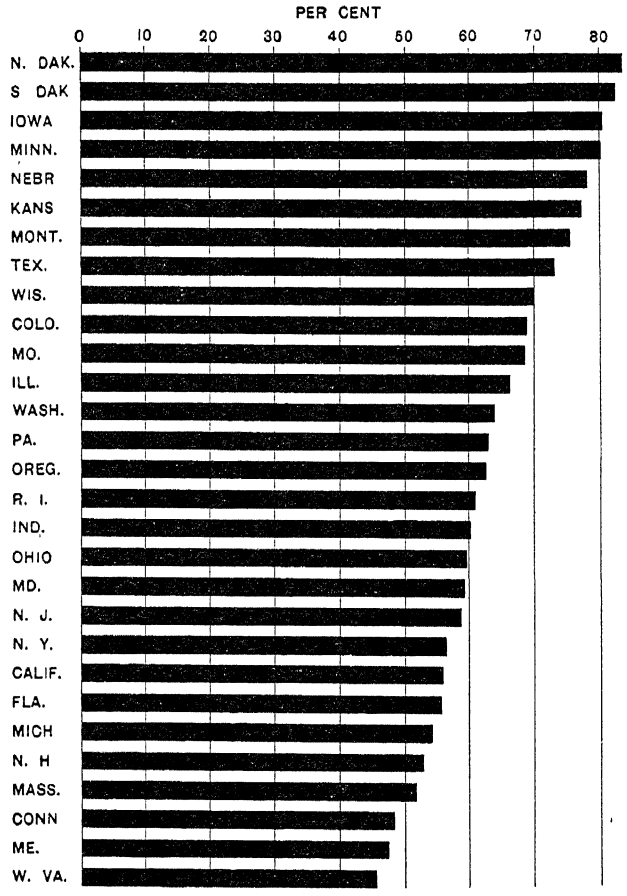


TABLE 4.—CITIZENSHIP OF THE POPULATION, BY COLOR, NATIVITY, SEX, AND AGE, FOR THE UNITED STATES: 1890 TO 1930

[Figures for white population in 1920 and 1910 have been adjusted by deducting the estimated number of persons who would have been classified as Mexican in 1930]

CENSUS YEAR, SEX, AGE, AND COLOR OR RACE	Total population	Native population	FOREIGN-BORN POPULATION					PER CENT OF TOTAL FOREIGN BORN				CITIZENS, NATIVE OR NATURALIZED	
			Total	Naturalized	Having first papers	Alien	Unknown	Naturalized	Having first papers	Alien	Unknown	Number	Per cent of total population

Introduction 495
Year of immigration by country of birth 496
Urban, rural-farm, and rural-nonfarm population 496

DIAGRAM

Year of immigration of the foreign-born white population, by country of birth: 1930 497

TABLES

UNITED STATES

1. Year of immigration of the foreign-born population of the United States: 1930 495
2. Per cent distribution of the foreign-born white population of the United States by year of immigration and by country of birth: 1930 496
3. Year of immigration of the foreign-born white population of the United States, in urban, rural-farm, and rural-nonfarm areas: 1930 496
4. Year of immigration of the foreign-born population, by color or race and sex, for the United States, urban and rural: 1930 498
5. Year of immigration of the foreign-born population, by color or race and sex, for the United States: 1920 and 1910 499
6. Year of immigration of the foreign-born population of the United States, by color or race and sex, with "unknown" distributed: 1930, 1920, and 1910 500
7. Year of immigration of the foreign-born white population, by sex and country of birth, for the United States: 1930 501
8. Per cent distribution of the foreign-born white population, by year of immigration and country of birth, by sex, for the United States: 1930 503
9. Year of immigration of the foreign-born white population of the United States, by country of birth, for urban, rural-farm, and rural-nonfarm areas: 1930 505

UNITED STATES—Continued

Page

10. Year of immigration of the foreign-born white population of the United States, by sex, for urban, rural-farm, and rural-nonfarm areas: 1930 507

DIVISIONS AND STATES

11. Year of immigration of the total foreign-born population, by divisions and States: 1930 508
12. Year of immigration of the foreign-born white population, by sex, by divisions and States: 1930 509
13. Year of immigration of foreign-born Negroes, Mexicans, Chinese, and Japanese, for selected States: 1930 512
14. Year of immigration of the foreign-born white population, by sex and country of birth, by States: 1930 513
15. Year of immigration of the foreign-born white population, by country of birth, for urban, rural-farm, and rural-nonfarm areas, by States: 1930 527

PRINCIPAL CITIES

16. Year of immigration of the total foreign-born population, for cities of 100,000 or more: 1930 540
17. Year of immigration of the foreign-born white population, by sex, for cities of 100,000 or more: 1930 541
18. Year of immigration of the foreign-born white population, by sex and country of birth, for cities of 500,000 or more: 1930 545
19. Year of immigration of the foreign-born white population, by country of birth, for cities of 100,000 to 500,000 and having at least 5,000 foreign-born white: 1930 553
20. Year of immigration of the foreign-born white population, for cities of 25,000 to 100,000: 1930 560
21. Year of immigration of foreign-born Negroes, Mexicans, Chinese, and Japanese, for selected cities: 1930 562

CHAPTER 9—YEAR OF IMMIGRATION OF THE FOREIGN BORN

INTRODUCTION

The inquiry as to the year of immigration of the foreign-born population has been made at each census beginning with that of 1910. Similar information was obtained in 1890 and 1900 through a question as to the number of years of residence in the United States, though the tabulation in 1890 was limited to alien (unnaturalized) males 21 years old and over. In 1910 the form of the inquiry on the census schedule was changed so as to obtain the actual calendar year of immigration into the United States. This form of inquiry has been retained in the censuses of 1920 and 1930. The statistics here presented relate to the foreign-born population of continental United States, and are presented by States and for cities of 25,000 or more. The year of immigration was not tabulated by counties nor for cities having less than 25,000 inhabitants. Statistics for Alaska, Hawaii, Puerto Rico, the Panama Canal Zone, and the Virgin Islands of the United States are given in the Fifteenth Census Report on Outlying Territories and Possessions.

The data on year of immigration for the total foreign-born and for the foreign-born white population are summarized in Table 1.

TABLE 1.—YEAR OF IMMIGRATION OF THE FOREIGN-BORN POPULATION OF THE UNITED STATES: 1930

YEAR OF IMMIGRATION	TOTAL FOREIGN-BORN POPULATION		FOREIGN-BORN WHITE POPULATION	
	Number	Per cent	Number	Per cent
Total	14,204,149	100.0	13,366,407	100.0
1925 to 1930	1,085,214	7.6	960,238	7.2
1920 to 1924	1,738,185	12.2	1,552,096	11.6
1915 to 1919	730,309	5.1	553,691	4.1
1911 to 1914	1,811,637	12.8	1,712,247	12.8
1901 to 1910	3,823,694	26.9	3,681,400	27.5
1900 or earlier	4,429,494	31.2	4,366,265	32.7
Unknown	585,616	4.1	540,470	4.0

The tabulations for year of immigration have always been made for single years covering a period of four, five, or six years preceding the date of the census, and for groups of years for earlier dates. With this form of presentation, direct comparisons with the returns of preceding censuses are of little value. There is, for example, no significance in a comparison between the number of survivors in 1930 of the immigration of the five years 1920 to 1924 with the number of survivors in 1920 of the immigration of 1910 to 1914. Statistics from the censuses of 1920 and 1910 are therefore shown in Table 5, for the complete series of years as originally tabulated, only as a matter of record. In Table 6, however, the statistics from the censuses of 1930, 1920, and 1910 have been so arranged as to give a significant comparison for such groups of years as have been carried through two or more successive censuses. For example, this table shows, for the immigration of the 10 years from 1901 to 1910, the number of survivors in 1910, 1920, and 1930. The total foreign-born population as enumerated in 1900 has been included in this table to complete a comparison through four censuses of the foreign-born population which has survived from the immigration of the nineteenth century. In this table the foreign-born population for whom the year of arrival was not reported ("unknown") has been distributed on the assumption that the proportions arriving during each period of years were the same for the immigrants for whom the year was not reported as for those for whom the information was secured. This distribution, while arbitrary, is necessary for purposes of comparison, on account of the variation from census to census in the number for whom the year of immigration was not reported.

The decrease from one census to the next in the number returned as arriving in each group of years is due primarily to mortality, although it is affected to some extent by the emigration of foreign-born persons. It will be noted that the decrease in the number of persons arriving in 1900 and earlier is more rapid from census to census than the decrease for any other group of years. This is due to the fact that this group includes a large number of persons of advanced age among whom the death rate is high, while the immigrants who arrived after 1900 are for the most part still in middle life.

During the years 1914 to 1919 immigration to the United States was greatly reduced as a result of the World War, and from 1925 to 1930 immigration was restricted by law. Even in the years from 1920 to 1924 the number of immigrants was small as compared with that in any 5-year period between 1901 and 1914.

In 1930 the survivors of the immigration of the 14 years from 1901 to 1914 far outnumbered the survivors of the later immigration from 1915 to 1930. Under the present policy of immigration restriction, the net immigration in each year is not sufficient to replace the mortality in the foreign-born population.

Year of immigration by country of birth.—Statistics of year of immigration by country of birth, which have been tabulated for the first time from the returns of the Fifteenth Census, show clearly the changes which have taken place in 30 years in the nationality of the immigrants coming into the United States. Of the population living in the United States in 1930 who were born in Germany, Sweden, and Wales, more than 50 per cent had arrived in 1900 or earlier, while of the population born in Poland, Hungary, Yugoslavia, Italy, and Greece, less than 20 per cent had arrived in 1900 or earlier. Of the foreign born enumerated in 1930 who arrived in 1900 or earlier, 21.5 per cent were born in Germany, 11.6 per cent in Canada, 7.9 per cent in the Irish Free State, 7.6 per cent in England, and 7.1 per cent in Sweden. The heaviest immigration from Ireland was between 1840 and 1860 and many of the Irish born were already old in 1900 and subject to a high death rate. The German immigration was also early. Immigration from Canada and England was continuous from 1840 to 1890, while from Sweden the largest number of arrivals was between 1880 and 1890, and the average age of the survivors in 1900 must have been many years lower than that of the Irish-born population in that year.

The distribution by year of immigration is shown for the more important countries of birth in Table 2.

Urban, rural-farm, and rural-nonfarm population.—Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, towns (townships) are classified as urban if they have a population of 2,500 or more and certain urban characteristics; and a few large and densely populated townships in other States are likewise classified, even though not formally incorporated as municipalities.

In addition to the classification of the population as urban and rural, the rural population is subdivided into rural-farm and rural-nonfarm, on the basis of the replies to a question reading "Does this family live on a farm?" The rural-farm population includes all persons living on farms in the rural areas. The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

In general, the tendency of the earlier immigrants was to settle on farms, while that of the recent immigrants is to settle in the cities. Considerable significance therefore attaches to the data on year of immigration as presented in Table 3 for urban, rural-farm, and rural-nonfarm areas.

TABLE 2.—PER CENT DISTRIBUTION OF THE FOREIGN-BORN WHITE POPULATION OF THE UNITED STATES BY YEAR OF IMMIGRATION AND BY COUNTRY OF BIRTH: 1930

COUNTRY OF BIRTH	PER CENT OF TOTAL ARRIVING IN—						
	1925 to 1930	1920 to 1924	1915 to 1919	1911 to 1914	1901 to 1910	1900 or earlier	Unknown

[1] In 1920 and 1910 most of the persons who would have been classified as "Mexican" in 1930 were returned as white. The number of foreign-born Mexicans thus included has been estimated at 457,360 in 1920 (259,131 males and 198,229 females), and 211,233 in 1910 (129,866 males and 81,367 females), but there is no basis for distributing these estimates by year of immigration.

TABLE 6.—YEAR OF IMMIGRATION OF THE FOREIGN-BORN POPULATION OF THE UNITED STATES, BY COLOR OR RACE AND SEX, WITH "UNKNOWN" DISTRIBUTED: 1930, 1920, AND 1910

[1] See footnote on Table 5.

[2] Figures for periods ending with 1910 are "short" by approximately the net immigration between the census date, Apr. 15, and the end of the year. The total net immigration for 1910 was 817,619.

[3] Figures are "short" by approximately the net immigration from June 1 to Dec 31, 1900. The total net immigration in 1900 was estimated at 320,000.

Distribution by single years of age, for the total population, by sex: 1930 ... 571
Distribution by age periods, for the total population and for the principal color and nativity classes, by sex: 1930 ... 572
Distribution by age periods, for the principal color and nativity classes, by sex, for urban, rural-farm, and rural-nonfarm areas: 1930 ... 574

TABLES

United States

1. Age by 5-year periods for the United States, 1930, with per cent distribution by age, 1880 to 1930 ... 566
2. Per cent distribution by age for the population of the United States, by color and nativity: 1930 ... 567
3. Age by 5-year periods, by sex, for the United States: 1930 ... 567
4. Median ages by color, nativity, and sex, for the United States: 1930 and 1920 ... 568
5. Median ages, by color and sex, for the United States: 1790 to 1930 ... 568
6. Age distribution and sex ratios, for the urban, rural-farm, and rural-nonfarm population of the United States: 1930 ... 570
7. Age by 5-year periods, by sex, for the United States: 1850 to 1930 ... 576
8. Age by 5-year periods, by color, nativity, and sex, for the United States: 1930 and 1920 ... 577
9. Age by 5-year periods, by color, nativity, and sex, for the United States: 1880 to 1930 ... 578
10. Per cent distribution by 5-year age periods, by color, nativity, and sex, for the United States: 1880 to 1930 ... 581
11. Age by 5-year periods, for the native white population of foreign parentage and of mixed parentage, by sex, for the United States: 1930, 1920, and 1910 ... 583
12. Males per 100 females by 5-year age periods, by color and nativity, for the United States: 1930 and 1920 ... 583
13. Cumulative age groups, by color, nativity, and sex, for the United States: 1930 ... 584
14. Per cent distribution by cumulative age groups, by color, nativity, and sex, for the United States: 1890 to 1930 ... 585
15. Age by 5 and 10-year periods for the minor races, by sex, for the United States, urban and rural: 1930 ... 586
16. Age by 5-year periods, by color, nativity, and sex, for the urban, rural-farm, and rural-nonfarm population of the United States: 1930 and 1920 ... 587
17. Per cent distribution by 5-year age periods, by color, nativity, and sex, for the urban, rural-farm, and rural-nonfarm population: 1930 and 1920 ... 591
18. Age by single years up to 4, by color, nativity, and sex, for the urban and rural population: 1930 and 1920 ... 592
19. Age by single years up to 4, by color, nativity, and sex, for the rural-farm and rural-nonfarm population: 1930 ... 592
20. Age by single years, for the total population of the United States, 1880 to 1930, and for the white and Negro population, 1910 to 1930 ... 593
21. Age by single years, by color, nativity, and sex, for the United States: 1930 ... 595
22. Per cent distribution by single years of age, by color, nativity, and sex, and for the urban, rural-farm, and rural-nonfarm population of the United States: 1930 ... 597
23. Age by single years, by color, nativity, and sex, for the urban, rural-farm, and rural-nonfarm population of the United States: 1930 ... 598

Divisions and States

24. Age by 5-year periods, by color, nativity, and sex, by divisions and States: 1930 and 1920 ... 602
25. Per cent distribution by 5-year age periods, by sex, by States: 1880 to 1930 ... 660
25a. Native white children under 5 years old of mixed parentage, by nativity of mother, for urban, rural-farm, and rural-nonfarm areas, by States: 1930 ... 668
26. Age by 5 and 10-year periods for the minor races, by States: 1930 ... 669
27. Age by single years for the total population, by States: 1930 ... 671
28. Age by single years up to 29, by color, nativity, and sex, and for urban, rural-farm, and rural-nonfarm population, by States: 1930 ... 674
29. Age by single years from 60 to 79, for the white population, by sex, by States: 1930 ... 691
30. Age by single years from 60 to 79, for the Negro population, by sex, for States having at least 100,000 Negroes: 1930 ... 693
31. Age by 5-year periods, by color, nativity, and sex, for the urban, rural-farm, and rural-nonfarm population, by States: 1930 and 1920 ... 694
32. Per cent distribution by 5-year age periods, for the urban, rural-farm, and rural-nonfarm population, by sex, by States: 1930 and 1920 ... 718

Principal Cities

33. Age by 5-year periods, by color, nativity, and sex, for cities of 500,000 or more: 1930 and 1920 ... 724
34. Age by single years up to 29, by color, nativity, and sex, for cities of 500,000 or more: 1930 ... 742
35. Age by single years from 60 to 79, for the white population, by sex, for cities of 500,000 or more: 1930 ... 748
36. Age by single years from 60 to 79, for the Negro population, by sex, for cities of 500,000 or more having at least 50,000 Negroes: 1930 ... 748
37. Age by 5 and 10-year periods for the minor races, for cities of 100,000 or more: 1930 ... 749
38. Age by 5-year periods, with single years under 5, by color, nativity, and sex, for cities of 50,000 to 500,000: 1930 ... 751
39. Age by 5-year periods, by sex, for cities of 25,000 to 50,000: 1930 ... 796

Age Distribution and Country of Origin

40. Age of the white population of foreign birth or parentage, by sex and country of origin, for the United States: 1930 ... 806
41. Age of the white population of foreign birth or parentage, by sex and country of origin, in urban, rural-farm, and rural-nonfarm areas: 1930 ... 808
42. Age of the white population of foreign birth or parentage, by country of origin, by States: 1930 ... 811
43. Age of the white population of foreign birth or parentage, by country of origin, for cities of 500,000 or more: 1930 ... 826

CHAPTER 10—AGE DISTRIBUTION

INTRODUCTION

At every census some attempt has been made to distribute the population by age. At the first census in 1790, white males 16 years old and over were shown separately from those under 16. In 1800 and 1810 white males and white females were distributed into five age groups—under 10, 10 to 15, 16 to 25, 26 to 44, and 45 and over. In 1820 the same distribution was maintained, and, in addition, white males 16 and 17 were shown as a separate subgroup. At this census the slave and free colored population were first distributed by age (four groups). In 1830 and 1840 the white population under 20 was shown by 5-year periods, and that 20 years old and over by 10-year periods, while the slave and the free colored population were distributed into six age groups. In 1850 the census returns were made on a new basis, the schedule providing a line for each person, in place of a line for each family; and the exact age of each person was reported. In 1850 and 1860, ages were tabulated for whites, slaves, and free colored in 5-year periods under age 20, with children under 1 shown as a separate group, and in 10-year periods from 20 years to 100 and over. In 1860 the Chinese and the civilized Indians were distributed in the same way. In 1870 the native, foreign-born, native white, foreign-born white, colored, Chinese, and civilized Indian populations were distributed by single years up to 4, then by 5-year periods. In addition, ages 18 and 19 were shown separately as one group, to make it possible to obtain the total of militia age (18 to 44), and the age group 20–24 was divided into age 20, and ages 21–24, thus making it possible for the first time to obtain the population 21 years old and over. In 1880, and at each subsequent census, the population, classified by color, nativity, and sex, has been tabulated by single years of age, though by reason of the limitations of space, publication of the figures for areas smaller than the United States as a whole (States, cities, etc.) has been limited rather largely to 5-year periods or broader age groups. Beginning with 1890, the same tabulation by age and sex was made for the native white population classified according to parentage. In 1930, for the first time, age data by single years, by color, nativity, parentage, and sex, are published for the urban, rural-farm, and rural-nonfarm population of the United States, and age statistics by 5-year periods are published for these three areas or types of population in each State.

For various uses to which census material is put, statistics in regard to age are of great importance. Mortality rates attain their full value only when the population can be distributed according to sex and age. Satisfactory birth rates and marriage rates can be computed only when statistics with regard to age, sex, and marital condition are available. The voting strength depends upon the age distribution, and the military strength on the distribution according to age and sex. The differences in the age distribution of the native and the foreign-born population are important in their bearing on the economic, social, and political effects of immigration. Statistics of school attendance and illiteracy would have much less value without the distribution by age. In fact, there are very few questions in vital statistics or sociology which can not be studied with greater profit when the age distribution of the population is taken into consideration.

The age classification is based on age at last birthday, that is, age in completed years.

The statistics of age distribution for continental United States are given in detail in this chapter by States and for cities of 25,000 or more. Age statistics for counties and smaller cities are published in Volume III of the Fifteenth Census Reports on Population, and in the Second Series State Bulletins which are consolidated to make up that volume. For the outlying possessions enumerated in the Fifteenth Census, the age data are presented in a series of bulletins giving population statistics for these areas and in the special report entitled "Outlying Territories and Possessions."

Distribution by single years of age.—In a population unaffected by immigration, the age distribution would be determined wholly by births and deaths. Such a population would be continually replenished by births and depleted by deaths, and the number of survivors at any age would normally be less than the number at any younger age, although some irregularities might result from unusual increases or decreases in the number of births from year to year, or from an excessive number of deaths among the persons born in any particular year or group of years. In the United States the native white population of native parentage most nearly approximates the age distribution of an isolated community. The extreme departure from the conditions of an isolated community is a foreign-born population which is replenished only by immigration. Since a large proportion of migrants are in the early years of adult life, in a foreign-born population the number of persons at any given age below a definite mode will tend to be greater than the number at any younger age, while above the mode the conditions will be reversed.

The age distribution of the population of the United States is that of a combination of native and foreign-born elements. Since approximately seven-eighths of the population is native, the distribution resembles that of a native population, but in the middle age periods the increase in the number of the foreign born at successive ages tends to balance the deaths among the native population. This condition results in a population with an age distribution abnormally weighted in the middle-age period, which includes not only the productive but the reproductive ages. This abnormality of age distribution has been further accentuated by the rapid fall in the birth rate in the past 30 years or more. Since there were relatively more births a generation ago than there are in the present generation, the number of survivors of those births is relatively high as compared with the expected survival from the births of the present generation. Since the middle years of life are not only the reproductive years but also years of relatively low death rates, the age distribution of the present population of the United States is favorable to a high birth rate and a low death rate. With the cessation of immigration the foreign-born population will be 10 years older in each decade and will soon pass the reproductive years and reach the years of high death rate. The inevitable result will be an increase in the (crude) death rate and a further decline in the birth rate. With no change in fertility or in health conditions, the aging of the population will in another generation bring about a balance of births and deaths, and in the absence of further immigration, a stationary or declining population.

Apart from the abnormalities in age distribution due to immigration, there are some irregularities in the age distribution by single years (see Table 21) which are due to errors in the census returns. Ages may be misstated, either intentionally or through ignorance of the true age on the part of the person giving the information. Where the age is not accurately known, there is a tendency to report it as a multiple of 2 or 5, or even, in the case of ages above 20, as a multiple of 10. There is also a tendency to concentrate on age 21 for men. In general, the degree of inaccuracy is greater for adults than for children. The errors at all ages are greatest for those classes of the population in which the proportion of illiterates is greatest. The returns also exaggerate the number of centenarians, particularly among Negroes and Indians.

At every census the enumeration of children under 5, and particularly of infants under 1, has been incomplete. This is evident from the fact that the number of children in the age group 10 to 14, in six out of the last eight censuses, was greater than the number in the age group under 5 years old at the census taken 10 years earlier. At the censuses of 1870 and 1910 the reverse was true, but in neither case was the difference great enough to allow for the deaths which must have occurred in the 10-year period. In the Negro population, it is probable that the underenumeration of children under 5 has usually amounted to 10 per cent or more. There is also a definite shortage in the enumeration of young children classed as native white of native parentage. On the other hand, the enumeration of native white children of foreign parentage appears to be practically complete. The underenumeration of children is not peculiar to the United States census. It has been noted by a comparison of ages as reported by the British census and in the census returns from some of the countries of continental Europe.

Tables 20 and 21, which relate to the United States as a whole, present the age distribution by single years up to 100, and Table 27 presents a similar distribution for the total population of each State. In Tables 28 and 34, the single-year distribution for persons under 30 is given for States and for cities of 500,000 or more. In Tables 29, 30, 35, and 36 the age distribution by single years is presented for persons 60 to 79 years of age. These tables, which are a new feature in the 1930 reports, are presented for the convenience of those who are studying the problem of old-age dependency.

Distribution by 5-year age periods.—In order to neutralize the effect of the concentration of multiples of 2 and 5, as well as to economize on space (or to make possible the presentation of age statistics for many classes of population in many areas), the age statistics are presented in most of the tables by 5-year periods. For many purposes these statistics are more useful, as well as more compact, because they avoid some of the irregularities of the single-year series and at the same time present the age distribution with a sufficient degree of detail to serve most purposes.

The distribution of the 1930 population of the United States by 5-year age periods is shown in Table 1, with percentages representing the distribution at each census from 1880 to 1930.

TABLE 1.—AGE BY 5-YEAR PERIODS FOR THE UNITED STATES, 1930, WITH PER CENT DISTRIBUTION BY AGE, 1880 TO 1930

AGE	Population, 1930	PER CENT DISTRIBUTION					
		1930	1920	1910	1900	1890	1880

Age distribution by color and nativity.—Table 2 shows the per cent distribution by 5-year age periods for the 1930 population of the United States classified by color, nativity, and parentage. The population figures on which these percentages are based appear in Tables 8 and 9.

TABLE 2.—PER CENT DISTRIBUTION BY AGE FOR THE POPULATION OF THE UNITED STATES, BY COLOR AND NATIVITY: 1930

[Per cent not shown where less than 0.1]

AGE	Total population	NATIVE WHITE				Foreign-born white	Negro	Other races
		Total	Native parentage	Foreign parentage	Mixed parentage			
All ages	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Under 5 years	9.3	10.4	11.3	6.6	10.0	0.2	10.3	14.2
5 to 9 years	10.3	11.3	11.9	9.5	10.7	0.9	11.5	14.0
10 to 14 years	9.8	10.9	10.7	11.8	10.4	1.1	10.5	10.3

Unknown	0.1	0.1	0.1	-----	-------	0.1	0.1	0.1

The age distribution of the main color and nativity classes is shown graphically by sex in the eight diagrams on pages 572 and 573. The diagram representing the native white of native parentage is the most symmetrical and represents most nearly the age distribution in a stationary population. That for the foreign born not only shows the peculiarities of age characteristics of a group which is replenished only by immigration, but it shows also the predominance of males in the immigration of the years before 1914. The diagram for the native white of foreign parentage shows clearly the effect of successive variations in the volume of immigration. With the continuance of immigration restriction, the age distribution of this group will in time come to resemble that of the foreign born, but with the modal group from 25 to 30 years younger. The diagram for the native white of mixed parentage is more regular in form than that for the native born of foreign parentage. The apex is narrow because in the earlier years of heavy immigration there were comparatively few marriages between foreign born and natives. Such marriages probably did not become frequent until the native children of foreign parents reached maturity. The restriction of immigration has also begun to modify the age distribution of this class, but the modal age group is 35 years younger than the modal age group of the foreign born and 10 years younger than the modal group of the native white of foreign parentage.

The age distribution of Negroes, if ages were accurately reported, would approximate that of the native whites of native parentage, except that the younger groups would be relatively larger and the older groups smaller, because the life span of Negroes is shorter than that of whites. The age group under 5, as compared with that of 5 to 9, shows roughly the extent of the underenumeration of young Negro children, while the irregularities in older age groups are the result of the tendency to report ages in multiples of 10, 5, and 2. The irregularity of the diagram as between males and females is probably the result of understatement of age by Negro females.

Among the Indians (see Table 15) the proportion of children is larger and that of persons in the middle age groups is smaller than in the case of either the native whites or the Negroes. The chief, and perhaps the sole, explanation of this fact is to be found in the effect of intermixture of white and Indian blood. The children born of marriages between whites and Indians are all classified as Indians, while only one of the parents in each such marriage is thus classified. Since these intermarriages are becoming increasingly frequent, the number of persons of Indian-white mixed blood is increasing and is relatively greater among children than among older persons. The inclusion of these children with the Indian population, together with the exclusion of one parent in each case, increases the proportion of children and diminishes the proportion of adults in the Indian population.

Age distribution by sex.—The distribution of the 1930 population of the United States by sex and 5-year age periods is shown in Table 3, which gives also the sex ratio (the number of males per 100 females) for each age period.

TABLE 3.—AGE BY 5-YEAR PERIODS, BY SEX, FOR THE UNITED STATES: 1930

AGE	Total population	Male	Female	PER CENT DISTRIBUTION		Males per 100 females
				Male	Female	
All ages	122,775,046	62,137,080	60,637,966	100.0	100.0	102.5
Under 5 years	11,444,390	5,806,174	5,638,216	9.3	9.3	103.0
5 to 9 years	12,607,609	6,381,108	6,226,501	10.3	10.3	102.5
10 to 14 years	12,004,877	6,068,777	5,936,100	9.8	9.8	102.2
15 to 19 years	11,552,115	5,757,825	5,794,290	9.3	9.6	99.4
20 to 24 years	10,870,378	5,336,815	5,533,563	8.6	9.1	96.4
25 to 29 years	9,833,608	4,860,180	4,973,428	7.8	8.2	97.7
30 to 34 years	9,120,421	4,561,786	4,558,635	7.3	7.5	100.1
35 to 39 years	9,208,645	4,679,860	4,528,785	7.5	7.5	103.3
40 to 44 years	7,990,195	4,136,459	3,853,736	6.7	6.4	107.3
45 to 49 years	7,042,279	3,671,924	3,370,355	5.9	5.6	108.9
50 to 54 years	5,975,804	3,131,645	2,844,159	5.0	4.7	110.1
55 to 59 years	4,645,677	2,425,992	2,219,685	3.9	3.7	109.3
60 to 64 years	3,751,221	1,941,508	1,809,713	3.1	3.0	107.3
65 to 69 years	2,770,605	1,417,812	1,352,793	2.3	2.2	104.8
70 to 74 years	1,950,004	991,647	958,357	1.6	1.6	103.5
75 to 79 years	1,106,390	547,604	558,786	0 9	0.9	98.0
80 to 84 years	534,676	251,138	283,538	0.4	0.5	88.6
85 years and over	272,130	117,010	155,120	0.2	0.3	75.4
Unknown	94,022	51,816	42,206	0.1	0.1	122.8

Separate figures are given for each sex in most of the detailed tables in this chapter. In addition, the age distribution for each sex in the total population and in each class of the population is shown by 5-year periods in the diagrams on pages 572 and 573. In

order to permit ready comparison of the proportions of males and females in each age period, the percentages shown for the sexes in connection with each diagram are based on the total population in the group or class to which the diagram relates, and not on the totals for the sexes separately. For example, the diagram relating to the native white population of native parentage shows that men in the age period 25 to 29 formed 3.9 per cent of the total native white population of native parentage, of both sexes, whereas Table 8 shows that men in this age period formed 7.7 per cent of the total native white males of native parentage.

Differences in age distribution as between males and females in the total population of the country are to be expected, by reason of the fact that the foreign born, whose age distribution is abnormal, include many more males than females.

This condition explains in part the fact that in the total population a larger proportion of the males than of the females are in the ages 35 to 69, inclusive, while the proportion under 35 years of age is greater among females than among males. (See Table 7.)

This difference in age distribution as between the sexes in the total population, however, is not wholly attributable to the presence of the foreign born, there being also considerable differences among the native classes. Starting with a moderate excess of males over females in the three age periods under 15 years, the returns for the native whites of native parentage show a practical equality of the sexes in the 15 to 19 year period, an excess of females in the 20 to 29 year periods, an excess of males in the 30 to 74 year periods, and an excess of females in the periods above 74 years. Among the native whites of foreign parentage and of mixed parentage, however, the females outnumber the males in most of the age groups, especially in the foreign-parentage class. (See Table 8.)

In general, the age distribution for males is more symmetrical and appears to be more accurate than that for females. In each native population class the number of females in the age group 20 to 24 years is larger than the expected survivorship from the age group 10 to 14 years as returned in 1920. This excess is undoubtedly due to understatement of age, and is not at all peculiar to this census. Prior censuses and the censuses of other countries show similar age discrepancies that can only be accounted for by erroneous returns. The knowledge that these inaccuracies exist does not, however, destroy the value of the returns. On the whole, the returns present a reasonably accurate age distribution, and when greater accuracy is necessary, it is always possible to make adjustments for obvious inaccuracies.

Median age.—The median may be defined in a general way as that item which stands at the midpoint of a series arranged in order of size or value. The median age in a group of persons would be, therefore, the age of the person standing in the middle of the series if the whole number of persons were arranged in order of age. Or the median age may be defined as that age which divides the population into two equal groups, one-half being older, and one-half younger, than the median. Table 4 shows the median age of the population of the United States in 1930 and 1920 by color, nativity, and sex, disregarding persons of unknown age.

TABLE 4.—MEDIAN AGES BY COLOR, NATIVITY, AND SEX, FOR THE UNITED STATES: 1930 AND 1920

COLOR AND NATIVITY	TOTAL		MALE		FEMALE	
	1930	1920	1930	1920	1930	1920
All classes	26.4	25.2	26.7	25.8	26.1	24.7
White	26.9	25.6	27.2	26.1	26.7	25.1
Native white	23 8	22.4	23.7	22.4	23.9	22.3
Native parentage	23.3	22.7	23.4	22.8	23.3	22.5
Foreign parentage	25 2	21.6	24.9	21.4	25.4	21.7
Mixed parentage	24.9	21.8	24.3	21.3	25.5	22.2
Foreign-born white	44.4	40.0	44.6	40.1	44.0	39.9
Negro	23.4	22.3	23.7	22.8	23.2	22.0
Mexican	20.2		21.6		18.7	
Indian	19.6	19.7	20.0	20.4	19.1	19.0
Chinese	32.3	40.2	35.1	42.7	17.3	19.4
Japanese	24.5	30.2	29.7	34.1	15.9	24.0

The difference between the median ages of the two sexes for all classes combined is due in part to the fact that among the foreign born, whose median age is much higher than that of the natives, the males are considerably in excess of the females.

The median ages of the total population and of the white population show uninterrupted increases since 1820. These increases have been due to two causes; first, an increase in average length of life; second, a reduction in the birth rate, which has resulted in a decrease in the proportion of young persons in the total population. Table 5 shows for the total population and for the white and colored population separately, disregarding persons of unknown age, the median age at each census from 1790 to 1930.

TABLE 5.—MEDIAN AGES, BY COLOR AND SEX, FOR THE UNITED STATES: 1790 TO 1930

CENSUS YEAR	ALL CLASSES			WHITE			NEGRO AND OTHER RACES [1]		
	Both sexes	Male	Female	Both sexes	Male	Female	Both sexes	Male	Female
1930	26.4	26.7	26.1	26.9	27.2	26.7	23.1	23.6	22.7
1920	25.2	25 8	24.7	25.6	26.1	25.1	22.5	23.0	21.9
1910	24.0	24 6	23.5	24.4	24 9	23.9	21.0	21.5	20.6
1900	22.9	23.3	22.4	23.4	23.8	22.9	19 7	20.0	19.5
1890	21.4	21.8	21.0	21.9	21.3	21.6	17.8	17.9	17.8
1880	20.9	21.1	20.6	21.3	21.6	21.0	18.0	18.0	18.0
1870	20.1	20.2	20.1	20.4	20.5	20.3	18.5	18.2	18.8
1860	19.4	19.7	19.0	19.7	20.1	19.3	17.7	17.8	17.5
1850	18.8	19.1	18.6	19.1	19.5	18.8	17.3	17.3	17.4
1840	17.8	17.8	17.7	17.9	17.9	17.8	17.3	17.0	17.5
1830	17.2	17.1	17.3	17.2	17.2	17.3	16.9	16.7	17.1
1820	16.7	16.6	16.7	16.5	16.5	16.6	17.2	16.9	17.4
1810				16.0	15.9	16.1			
1800				16.0	15.7	16.3			
1790					15.9				

[1] For 1930 includes Mexicans, who were classified as white at earlier censuses.

Divisions and States.—Very considerable differences exist among the nine geographic divisions of the country and among the individual States in regard to the age distribution of the total population and of specific classes of the population. The differences in regard to the total population are in part attributable to variations in the composition according to color, nativity, and parentage. Thus a large proportion foreign born tends to produce a relatively large proportion of adults in the total population.

The differences among the divisions and States with regard to the age distribution of specific classes of the population are due to various factors. Interstate migration has a great influence upon age distribution. Adults, particularly the younger adults, are relatively much more numerous among migrants than in the total population, and therefore a division or State which has lost extensively through interstate migration is likely to have a smaller proportion of persons in the younger and middle ages of adult life in its native population than one which has gained by such migration. The distribution of ages in the urban population is usually decidedly different from that in the rural population, partly by reason of migration from country to city, and consequently the age constitution of the total population of a given class in a State or division is much affected by the proportions urban and rural. Again, the age composition of the several native classes is affected by differences in birth rates and in death rates and by differences in the extent to which changes have taken place in these rates from one time to another. Finally, the age distribution of the foreign born and of the natives of foreign or mixed parentage in any given State or section of the country depends in considerable measure upon the period of time during which immigration to that State or section was most rapid.

Urban, rural-farm, and rural-nonfarm population.—Since there are important differences between urban and rural areas and between the farm and nonfarm population in rural areas, separate figures are given in considerable detail for these three classes or subdivisions of the population. Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, conditions are exceptional in that the compactly built portions of the towns (townships) are not separately incorporated or politically distinct in any way from the rural territory within the same town; nor is it the usual practice to incorporate even the larger places as cities until they attain a population in excess of 10,000. Consequently, if only the cities were counted as urban the classification would be quite inadequate. In 1920 and 1910 all towns in these three States which had a population of 2,500 or more were classified as urban. This resulted in the inclusion of a considerable number of places that were mainly rural in their general characteristics. In 1930 the special rule for these New England States has been modified so as to place in the urban classification, in addition to the regularly incorporated cities, only those towns in which there is a village or thickly settled area having more than 2,500 inhabitants and comprising, either by itself or when combined with other villages in the same town, more than 50 per cent of the total population of the town.

One other modification has been made in the definition of urban population for use in connection with the 1930 census. This modification extends the classification so as to include townships and other political subdivisions (not incorporated as municipalities, nor containing any area so incorporated) which had a total population of 10,000 or more and a population density of 1,000 or more per square mile.

Since it has been found impracticable to go back and readjust to the new basis the 1920 urban and rural figures as they were tabulated by color, sex, age, etc., they are presented in all tables as established in 1920.

In addition to the classification of the population as urban and rural, which is based on the size and political status (municipal incorporation) of the geographic unit in which the persons live, the population, both urban and rural, is further classified as farm and nonfarm on the basis of a question reading "Does this family live on a farm?"

For the farm population living in urban territory, which forms less than 1 per cent of the total farm population, no detailed tabulations were made; hence the presentation of classified data for the farm population is limited to that part living in rural territory and designated as rural-farm population. This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, rural-farm, and rural-nonfarm) and partly because it is felt that in general the farm families living within the corporate limits of cities or other incorporated places are living under conditions at least somewhat urban, rather than under typical farm conditions.

The rural-nonfarm, or "village," population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

The per cent distribution by 5-year age periods of the urban, rural-farm, and rural-nonfarm population is presented in Table 6, which shows also the number of males per 100 females for the three areas. The population figures on which these percentages and ratios are based appear in Table 16.

TABLE 6.—AGE DISTRIBUTION AND SEX RATIOS, FOR THE URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION OF THE UNITED STATES: 1930

[Per cent not shown where less than 0.1]

AGE	PER CENT DISTRIBUTION BY AGE			MALES PER 100 FEMALES

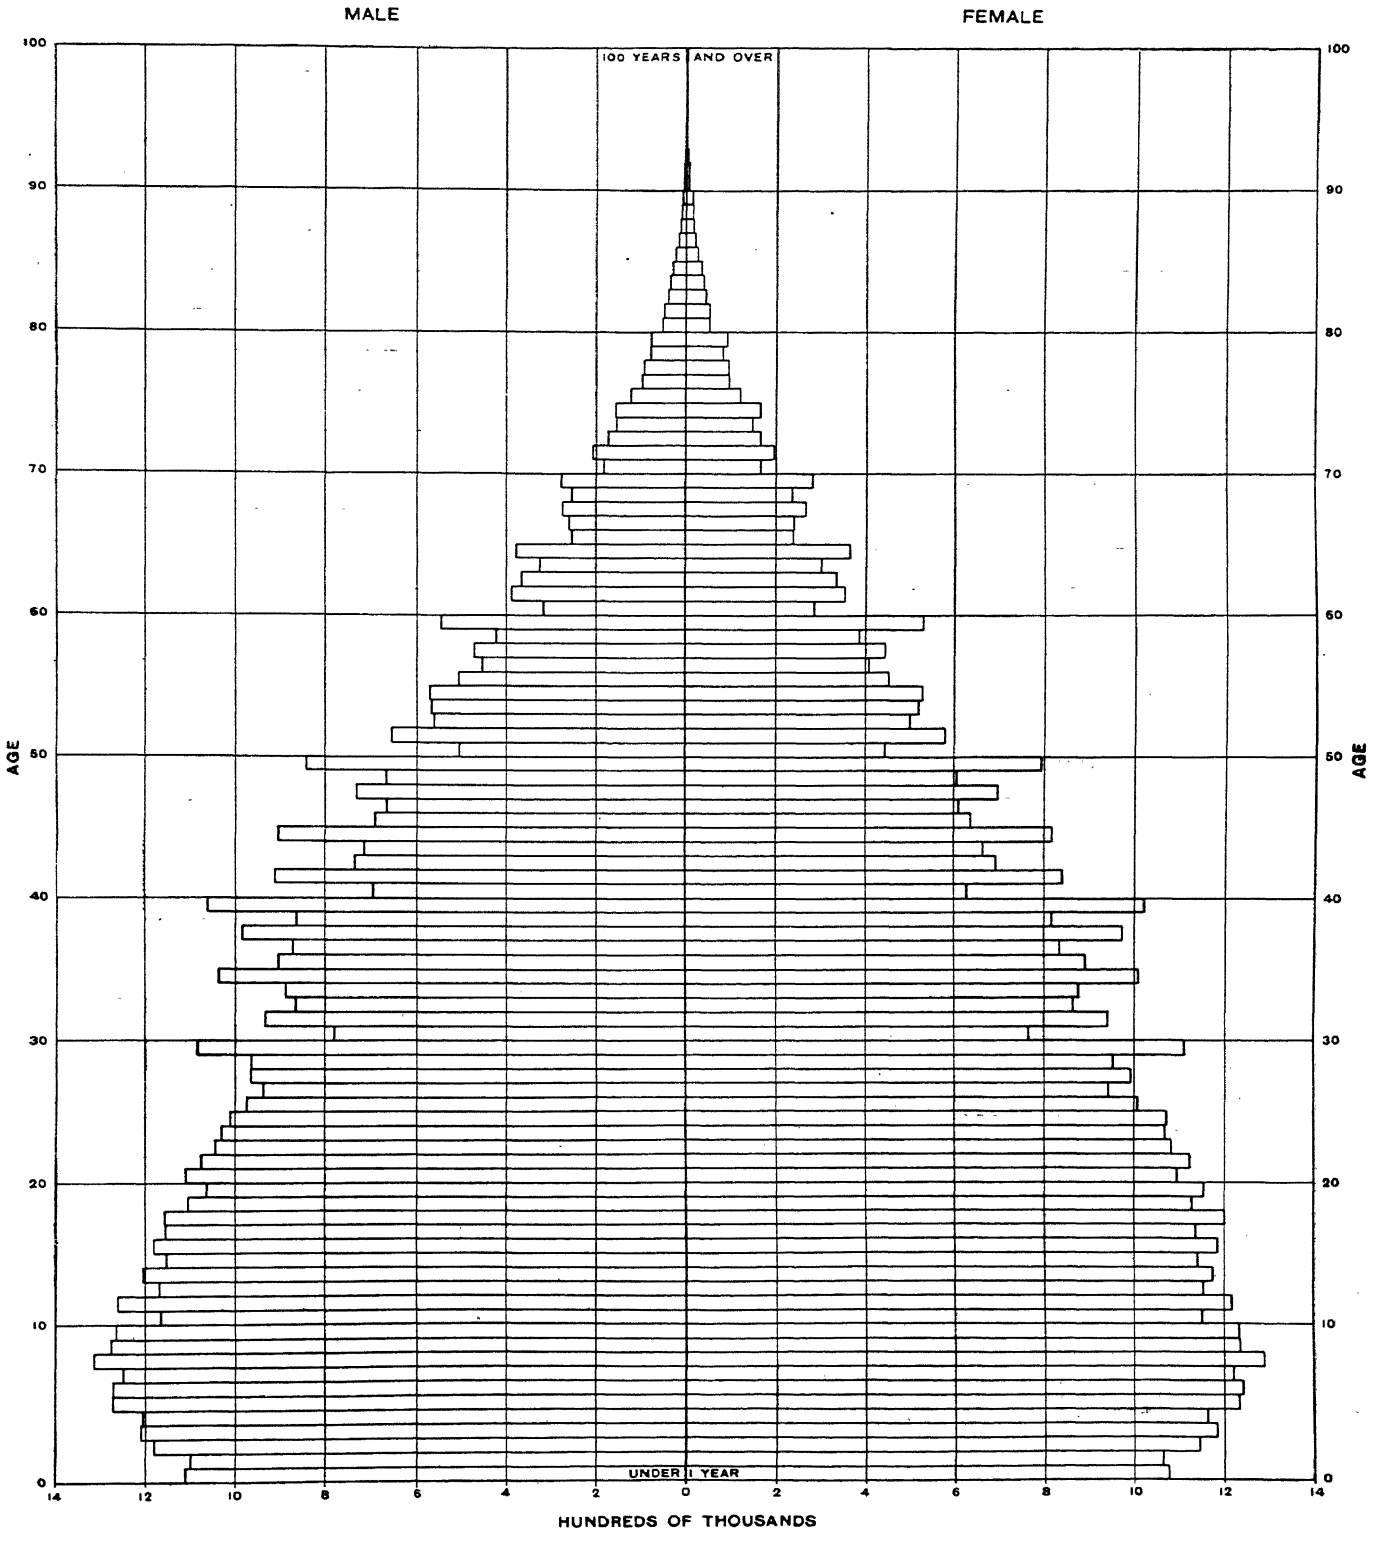
85 years and over	0.2	0.2	0.3	64.1	87.5	88.4
Unknown	0.1		0.1	119.9	137.2	126.7

The pronounced differences between urban and rural communities and between rural-farm and rural-nonfarm communities in regard to the age distribution of their population are in part attributable to differences in the color or race, nativity, and parentage composition of their population, but there are also pronounced differences between them in regard to the age composition of any one population class. The opportunities to be found in urban communities have attracted large numbers of persons in the more active ages, and, because of the effect of this cityward migration on age distribution, it is impossible to draw directly from the statistics any trustworthy conclusions as to the relative fecundity or the relative longevity of the native whites of native parentage in urban and rural areas.

The age distribution of the foreign-born whites and of the native whites of foreign or mixed parentage in urban and in rural areas, respectively, has been influenced to a very considerable extent by the period—whether recent or remote—during which immigration into these areas has been most rapid. A large proportion of the earlier immigration went to the rural districts, but most of the recent immigration has gone to the cities.

The age distribution of the Negroes in urban and in rural areas is affected by the very considerable country-to-city migration of persons of this race in the active age periods, and probably also by differences in birth and death rates between the two classes of communities.



With respect to the sex distribution, it will be seen that females, particularly in the adult ages, form a much larger proportion of the population in the urban areas than in the rural areas, notwithstanding the fact that the foreign-born whites—a class in which males are considerably in the majority—are centered mainly in cities.

Age by country of origin.—The foreign-born white population has been classified for 1930 by age in combination with country of birth, and the native white population of foreign or mixed parentage has been classified by age in combination with country of birth of parents. Except for a tabulation of the foreign-born white by age and country of birth made in 1910 but not published,[1] this is the first attempt to show the age distribution of the population of foreign derivation by nationality or country of origin.

These figures are summarized for the United States, and for urban and rural areas, in Tables 40 and 41, and are presented by States and for the more important cities in Tables 42 and 43.

[1] It is planned to publish these 1910 figures, together with additional details tabulated for 1930, in a special bulletin on the age distribution of the foreign-born white population.
